Week3 assignment

Q) Develop a python script that showcases basic learned, demonstrating your understanding python programming.

```
#write a code to to assigned a variable
a=7
b=59
c= a+b
print(c)
```

66

```
#wrte a variable that show 2 variables
sur_name="muhammad"
first_name="ushna"
full_name=sur_name+first_name
print(full_name)
```

muhammadushna

Displaying the data types of the variables

```
print(type(c))
```

<class 'int'>

```
print (type (full_name))
```

<class 'str'>

Displaying 2 different strings

```
#write a variable to display 2 different strings
name ="ushna"
address="takursite"
biodata=(f'{name} {address}')
print (biodata)
```

ushna takursite

```
#write a program to input two numbers and display greater number
a=int(input("25:,"))
b=int(input("6:,"))
c=int(input("5:,"))
```

```python
if(a>b and a>c):
    print(a,"is greater")
```

25:, [   ]
